

***Caputena*TM: An effective topical stick for treatment of headaches**

September 11, 2012

San Diego. Cymbiotics Inc., a San Diego-based specialty pharmaceutical company announced the launch of a new, and novel product called ***Caputena*TM** for treatment of headaches using Cymbiotics CetosomesTM technologies (*Caput* means head and *poena* means ache or pain in Latin).

One of the most common aches in this world is headache and most people look for something more than an oral analgesic. The novel formulation is not a liquid, lotion or cream and is a solid gel in a discrete stick that is easy to use. Unlike roll on type products which can easily get into the eyes, ***Caputena*TM** is a solid gel that applies easily to the affected areas.

The ***Caputena*TM** stick formulation contains CetosomesTM with cetyl esters, salicylic acid, several counterirritants and rubifacients in a proprietary gel base. The stick can be applied as required on the forehead, temples and the neck areas.

Cymbiotics Inc., licenses its novel products to large pharmaceutical companies, skin care companies and consumer health care company's worldwide.
