

***GLYSERA Lytner™*: NOVEL FACIAL EXFOLIATING LOTION WITH SKIN LIGHTENERS**

August 14, 2012

San Diego. Cymbiotics Inc., a San Diego, California USA based specialty pharmaceutical company announced the launch of a new product: a serum for gentle exfoliation of facial skin cells, also containing skin lighteners to provide fairer skin. The new product is Glysera Lytner™, primarily meant for night-time leave-on usage. Glysera Lytner™ contains an exfoliating agent in a mild and safe concentration, a mega- moisturizing agent and clinically proven skin lightening agents. The resulting effects smooth away unwanted dead skin cells while regenerating a skin that of a lighter shade. Within a few days, the skin tone shows a significant improvement and the darker areas start becoming lighter.

Glysera Lytner™ serum also contains a proprietary agent called Cetosomes™ that has been clinically shown to help penetrate the cetyl fatty esters in the Cetosomes, moisturize skin cells, promote collagen formation and help reduce facial wrinkles. Cetosomes contain fatty acid esters in specific combinations that reduce irritation and inflammatory redness, and reduce any irritation from the serum's exfoliating activities.

Cymbiotics Inc., licenses its products to large pharmaceutical companies, skin care companies and consumer health companies world-wide.
